

OVERVIEW

The H10720 and H10721 series are photosensor modules containing a metal package PMT and a high-voltage power supply circuit. The built-in PMT uses a metal package with the same diameter as a TO-8 metal package used for semiconductor photodetectors. Despite the small size nearly equal to photodiodes, this PMT delivers high gain, wide dynamic range, and high-speed response. Six types of products are available with different sensitivity characteristics such as spectral response ranges. Hamamatsu also provides "P" type with low dark count selected for photon counting measurement. The H10720 series are pin output type, while the H10721 are flexible cable output type.
